

Space Heater Safety Tips

From the Houston Fire Department

- ☐ Properly install and maintain a smoke detector.
- ☐ Never leave children unattended in a room or home with a space heater.
- ☐ Keep all combustible materials and yourself, at least three feet away from the heater.
- ☐ Open-faced heaters should have a proper screen and grates in place.
- ☐ Provide adequate ventilation, opening a window slightly (one-inch) to prevent carbon monoxide buildup.
- ☐ If your flame is not blue, it is not burning properly. It is producing Carbon Monoxide, which can't be seen, smelled or tasted. **TURN IT OFF!**
- ☐ Use flexible metal tubing with threaded ends to connect the heater to the gas valve. There should be a cutoff valve for the heater at the wall. Never use a rubber hose to connect a space heater to the gas valve!
- ☐ Use soapy water to check all connections and valves for leaks. **NEVER** use a match to test for a gas leak!
- ☐ Look for the American Gas Association label and follow the manufacturer's recommendations for proper usage.

Vented Gas / Fired Heating Appliances Tips - Central heating units, floor furnaces, recessed wall heaters, and vented space heaters.

- ☐ Inspect annually by a qualified service technician. Don't wait for cold weather!
- ☐ Do not use these type units without a proper vent pipe. Vent pipes must exhaust to the outside!

Electric Heaters Tips

- ☐ Never overload outlets or breakers.
- ☐ Don't use extension cords for the heater. If the cord is hot to the touch, turn off the heater and unplug it!
- ☐ Electric heaters permanently installed in the wall or ceiling should have lint and dust removed regularly. Lint and dust will burn!
